Mobile Identity and Access Management

Identity Management is a Serious Challenge

Who is this person claiming to be?

Does s/he have a permit to enter this facility?

What is the person's name, nationality and age?

What is the date, time and location of the person's visit?

Did we grant access to the visitor or denied it?

Can I perform checks while I'm away from my desk?

You have many more questions waiting in vain for answers.

The Solution is Here

1. Visitors present their **Smart Civil ID**

2. Efficiently capture visitor data <u>without causing delays</u> at the gates and log them in a book.

3. Check whether the person has a permit or not.

4. Grant or deny access to a facility.

5. Save everything and generate comprehensive reports.
